Recommended tools/material

BOSCH glue gun PKP-18E electronic	301128	1
Glue sticks approx. ø 11 x 200 mm, set of 25	301139	1 or
OPITEC craft glue, 100 ml	301988	1

Tools needed

Protective cover, scissors, washing up liquid, mixing beaker, measuring jug, spatula, paint brushes, glue

Instructions:

1. Rinse the mould well with water and washing up liquid. This will help to remove the casts easily later on.
2. Mix the casting compound using 1 part water with 2.5 parts casting compound.
3. Pour the mixture into the mould.
4. When the compound sets, it creates heat. As long as the mould still feels warm, the cast model should not be taken out.
5. Remove carefully after 30-40 minutes.
6. Let the cast dry again once it has been taken out of the mould and before painting it.
7. Paint the casts and the spatulas with acrylic paint and let the paint dry.
8. Draw designs on the casts and spatulas with the PlusterPens. Let the paint dry.
9. Affix the cast to a spatula (either with glue gun or craft glue).
