Basic Instruction for Soap Casting

To cast soap layers of different colours, for every soap layer you have to melt and dye soap separately. To achieve different shades of colour soap pigments can be mixed among each other.

You can add soap fragrance simultaneously with the pigment.

To avoid mixing of the individual soap layers, take care to pour liquid soap only on layers that have cooled down sufficiently.

You will know this when the cooled layer forms a "skin" similar to the one on self-made pudding.

Then you cautiously can pour another soap layer.

Pour the individual coloured layers into the desired casting mould.

Then allow the soaps to air dry.

Remove the soaps from the mould. If they don't come out easily put them into the freezer for approx. 10 minutes and then pour warm water over the back side of the casting mould. Now the soaps will slide off the mould easily.

Tip:

If you use rose or lavender petals, just sprinkle them into the liquid soap.

You can mix Sapolina colour powder into the liquid soap or dip a cooled off piece of soap into the dye.

Instruction Boxes

1. The white paper boxes can be decorated with napkin technique.
2. To do this cut out the motif from the napkin.
3. Separate the uppermost printed napkin layer from the two lower layers.
4. Place the backside of the napkin motif (uppermost layer) on the white box. (The motif faces upwards).
5. Take the bristle brush to apply deco glue to the motif starting from the center.
6. Allow to dry.
7. Take the ribbons and cut to size according to the size of the boxes.
8. Make a bow and a knot for every box.
9. Fill up boxes with fibre fill and a piece of soap.
10. Fasten ribbons, bows and deco felt to the boxes (glue gun).
